Are you tired of living with back pain?
Stop Pain Now!™

Today's Prescription
for Pain Relief

**Effective Treatments
of Lower Back Syndromes
WITHOUT Surgery!**

It's time to get your life BACK!

Do you suffer from...?

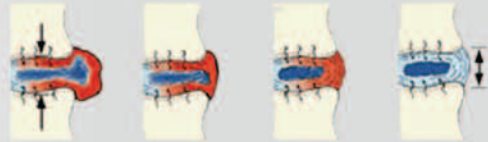

- Herniated or Bulging Discs
- Degenerative Disc Disease
- Posterior Facet Syndrome
- Sciatica
- Spinal Stenosis
- Spinal Arthritis
- Acute or chronic back pain

Are you a pre- or post-surgical back patient?

You may want to consider a non-invasive, non-surgical treatment for back pain that is experiencing success rates as high as 86% to 94%!* A simple evaluation by your doctor will tell you if you are a good candidate for IDD Therapy.

** Based on a multi-clinic retrospective study.*

The goal of computer directed spinal rehabilitation is to help align facet joints, relieve nerve root pressure, reverse high intradiscal pressure and facilitate the transfer of fluids, nutrients and oxygen back inside the disc.

What is IDD Therapy®?

Intervertebral Differential Dynamics™ Therapy is a highly precise computer applied regimen which utilizes treatment forces to manipulate and mobilize specific spinal segments. When properly administered, the treatment is able to achieve several objectives. First, unloading compressed spinal segments helps reduce built-up pressure on the affected disc. The nature of the cyclical graduating waveform also creates a spinal pumping effect inducing a vacuum within the disc and oxygen flow essential to disc health. Finally, a secondary modality called oscillation is delivered to the surrounding muscle tissue working to release and re-educate guarded spasmed muscles. All this is performed while you rest comfortably in a soothing glow of light, listening to relaxing music. A heated massage bed feature assures that you will complete your treatment session feeling refreshed.

It's time to get your life BACK!

Thousands of Documented Success Cases
Developed by Renowned Neurosurgeons
Non-Surgical, Non-Invasive, Painless
Treatment Takes About 4-6 Weeks
Relief Can Last A Lifetime!

Why should you consider IDD Therapy?

IDD Therapy is proven and effective.

The procedure has been studied extensively over the past six years and has been clinically validated. Thousands of patients have been successfully treated with IDD Therapy.

IDD Therapy is credible.

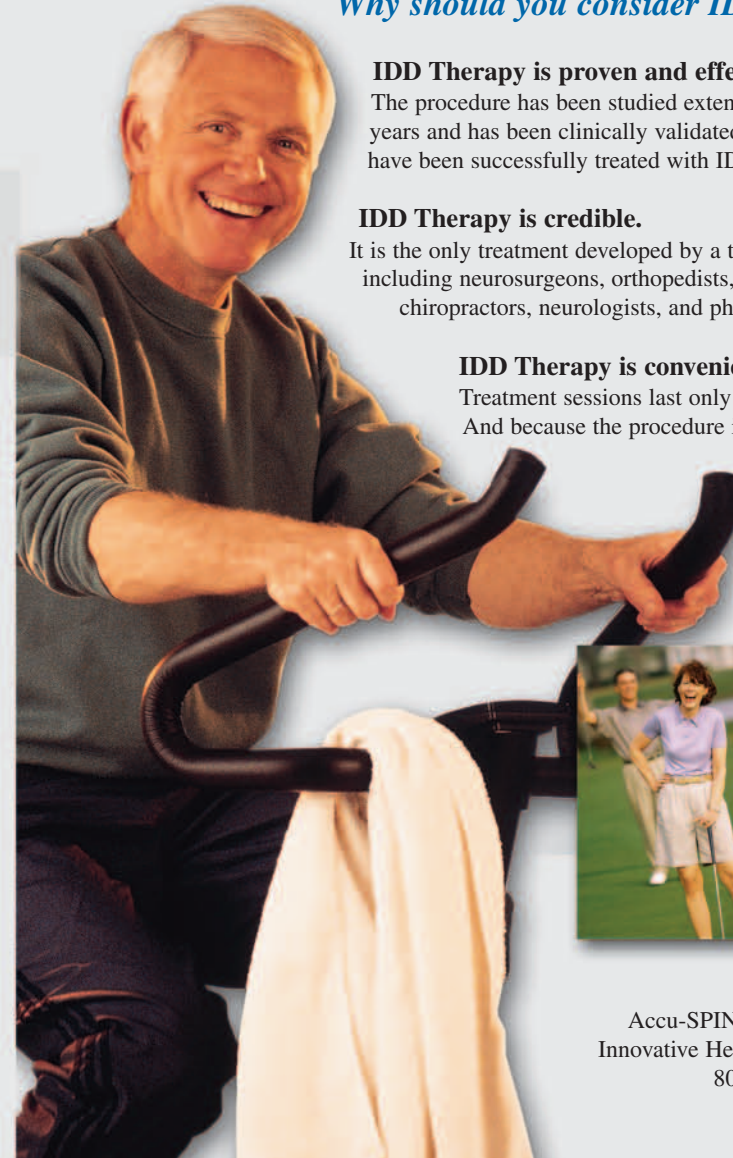

It is the only treatment developed by a team of back specialists, including neurosurgeons, orthopedists, physiatrists, osteopaths, chiropractors, neurologists, and physical therapists.

IDD Therapy is convenient.

Treatment sessions last only 25 to 30 minutes.

And because the procedure is non-invasive, most

IDD Therapy patients can carry-on with normal daily activities. Treatment takes about 4-6 weeks and can last a lifetime!

Accu-SPINA® is distributed by
Innovative Healthcare Solutions, LLC
800-526-5557

What are the benefits of computer directed spinal-rehab therapy?

1. No surgery is involved.
2. No drugs are involved.
3. Medical procedure is non-invasive.
4. Treatment is completed in approximately 1 month with minimal follow-up.
5. Unlike surgery, no recovery period is necessary.
6. Cost of treatment is minimal compared to the cost of surgery.
7. Most insurance companies reimburse for this type of therapy.
8. Financing for treatment is available under most circumstances.
9. Treatments are not only safe and painless, but comfortable and relaxing as well.
10. Non-strenuous work can continue during the treatment regimen.

TESTIMONIALS

"My lower back had been aggravating me for months. My regular doctor simply gave me more and more muscle relaxants. I finally decided to try something else. After receiving IDD Therapy, I can now move without pain and my left leg doesn't hurt anymore. I am so happy!"

Rhonda L.*

"I would recommend the Accu-SPINA System to anyone suffering from a herniated disc. I had suffered with low back pain and referred pain on and off for the past 10 years. I am happy to say that I have received tremendous relief and am able to carry on my normal routine with minimal discomfort."

Helen O.*

"Three years ago I was rear ended by a drunk driver. I tried everything – chiropractors, MRI series, conventional medicine, acupuncture, and massage therapy. Nothing worked, by 4 o'clock every day I had excruciating pain. Then a miracle took place when a friend told me about IDD Therapy. The procedure was simple and painless and I was amazed after the 8th session when 4 o'clock came and I was without pain. This machine needs to be in every clinic in America and shouted to the heavens! You don't need risky surgery, you can have the simplest of treatments and be cured."

David C.*

"After much frustration with years of nagging lower back and sciatic nerve pain, I set out to find relief. I had been told nothing could be done aside from pills, shots and eventual back surgery. Then I discovered IDD Therapy. Thanks to IDD Therapy I am feeling much better. I have begun to experience pain-free days. This treatment has given me back my life!"

Anna R.*

"Excellent Results. Because of the machine I am able to do everything the pain was preventing me from doing."

Krista P.

Why Should I Consider IDD Therapy®?

If you are like most back pain sufferers, you know the frustration of finding good treatment choices. Most options involve high risk, significant downtime and not much more than a 50% likelihood of relief. Complications from surgery can be severe and pain killers make it difficult to carry on daily activities.

IDD Therapy offers a greater than 86% success rate in treating and effectively eliminating severe back pain conditions. It is a gentle, comfortable therapy that painlessly works to restore normal spinal function.

The cost of IDD Therapy is minimal when compared to surgery, epidural injections or other invasive therapies. In fact, the total cost of a full regimen of IDD Therapy will usually be less than the co-pay you will have to pay out-of-pocket to have back surgery. Insurance, financing and payment options may be available to cover the cost. Ask your doctor.

How is IDD Therapy® treatment administered?

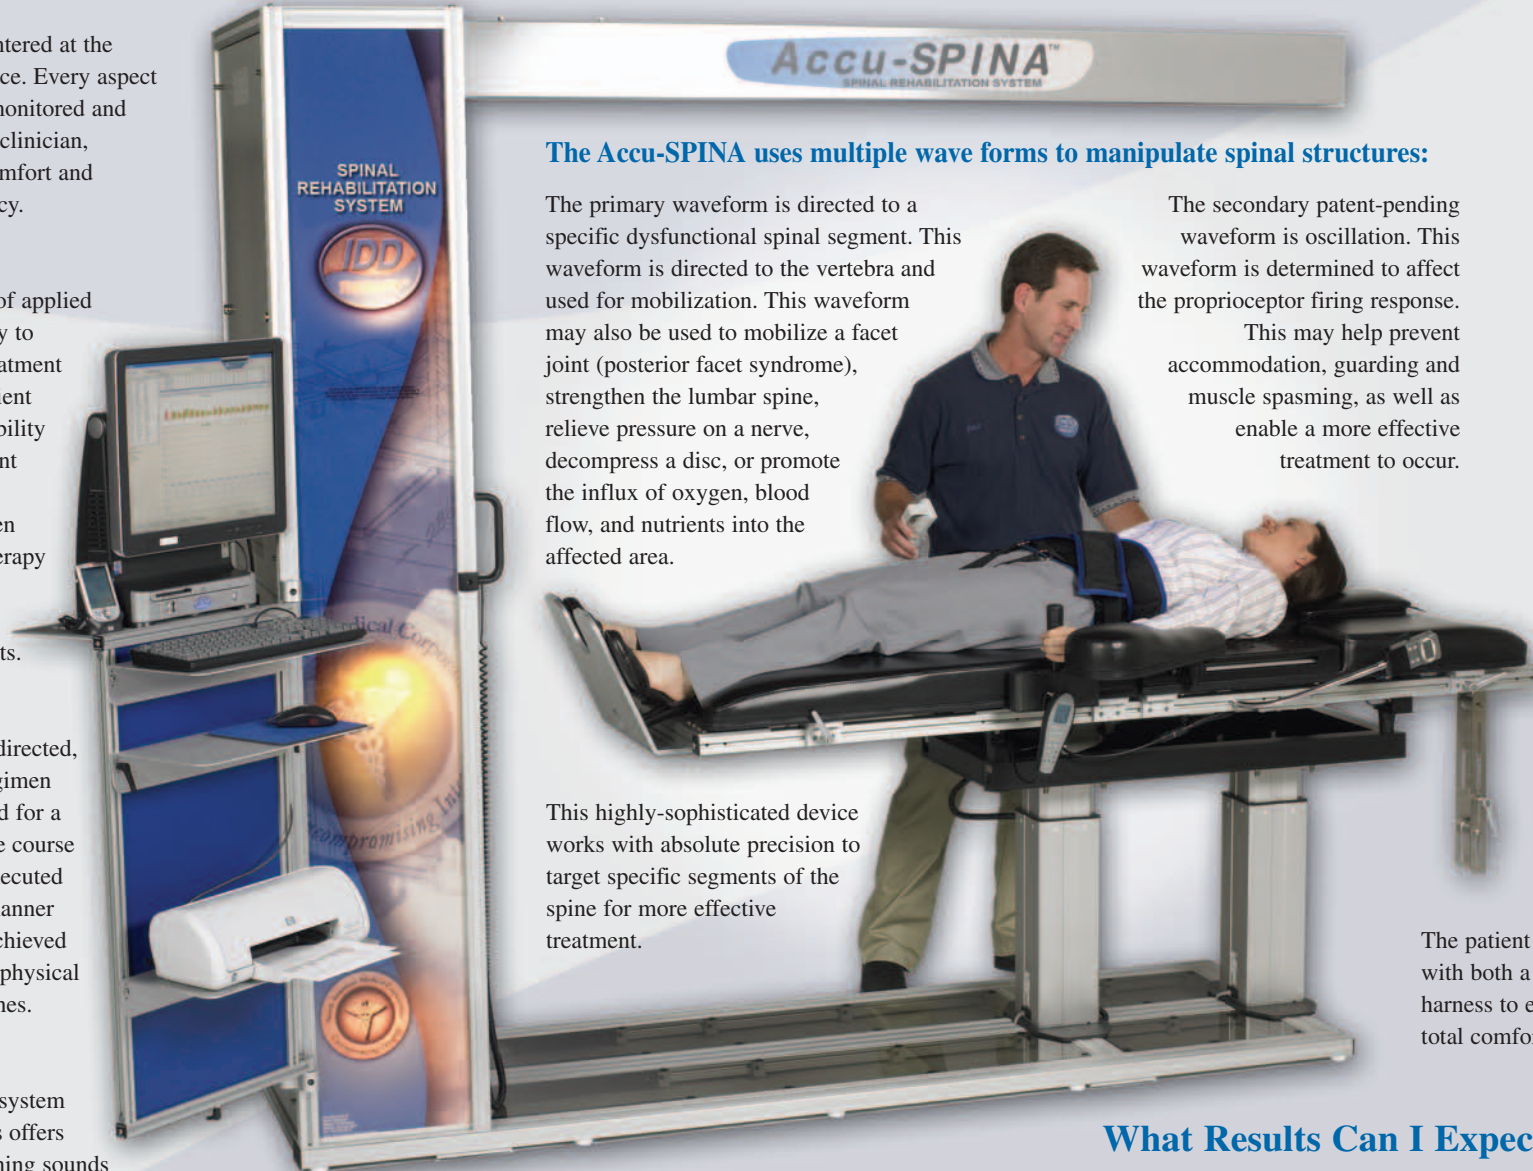

IDD Therapy is administered through the Accu-SPINA®, a state-of-the-art computer directed spinal-rehab system. The Accu-SPINA System is certified to deliver therapeutic treatment forces in a comfortable and soothing manner.

Patient data is entered at the computer interface. Every aspect of treatment is monitored and displayed to the clinician, assuring total comfort and maximum efficacy.

Active tracking of applied forces, the ability to individualize treatment according to patient needs, and the ability to quantify patient response to the treatment regimen pre- and post-therapy sessions further improves therapeutic results.

Fully computer directed, the treatment regimen can be duplicated for a full rehabilitative course which will be executed in an exacting manner that cannot be achieved by conventional physical therapy approaches.

Premium sound system with headphones offers a choice of soothing sounds or music.

The Accu-SPINA uses multiple wave forms to manipulate spinal structures:

The primary waveform is directed to a specific dysfunctional spinal segment. This waveform is directed to the vertebra and used for mobilization. This waveform may also be used to mobilize a facet joint (posterior facet syndrome), strengthen the lumbar spine, relieve pressure on a nerve, decompress a disc, or promote the influx of oxygen, blood flow, and nutrients into the affected area.

This highly-sophisticated device works with absolute precision to target specific segments of the spine for more effective treatment.

Studies show blue light waves promote relaxation.

A certified back pain specialist manages each 30-minute treatment session. The treatment regimen, comprised of approximately 20-30 sessions, lasts about 30 days.

The secondary patent-pending waveform is oscillation. This waveform is determined to affect the proprioceptor firing response.

This may help prevent accommodation, guarding and muscle spasming, as well as enable a more effective treatment to occur.

The bed is designed with comfort and safety in mind. The bed rotates into the vertical position to easily accommodate patients, even when incapacitated from pain. (See above).

The patient is secured to the machine with both a stabilization chest and pelvic harness to ensure exact positioning and total comfort during treatment.

What Results Can I Expect?

1. Pain relief, even after just a few sessions
2. Shrinkage of disc herniation
3. Fewer incidents of back pain and debilitation
4. Return to active lifestyle
5. Increased mobilization
6. Quicker return to work
